REGRESSION: Score x StudFacRatio (size: faculty member)

There's a strong association between university score and its student faculty ratio; we don't know if it's because of open/close course but every university is PUBLIC (since all top 25 in EU is public). Consequently, even the FACULTY COUNT seems to be sensitive to StudFacRatio even though we don't know how.

BARGRAPH score x International Score

We can see that DARKER TONES (associated to MORE INTERNATIONAL STUDENTS) are more frequent with HIGHER SCORES.
